NOVA GOLF

High Performance. Clear Vision.

SPECIALITY LENS RECOMMENDED FOR GOLFING!

Near Vision to read score card

Mid-Range Vision to focus on the ball

Distance Vision to focus on the target

INTRODUCING NOVA GOLF

Today's world offers a range of technologies for achieving perfect optimization as per individual needs. Lenses for golf are available in a number of styles to enhance visual and physical comfort. If you require correct and comfortable vision during golfing, by considering different distances on the course, you might want to consider a pair of NOVA GOLF lenses.

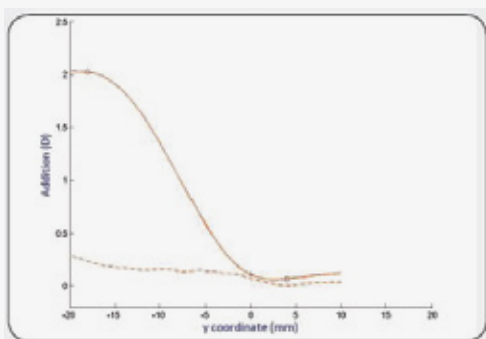

NOVA GOLF is available for both Single Vision & Progressive lenses. NOVA GOLF is a special type of lens option that will fit perfectly in a frame, including sports category.

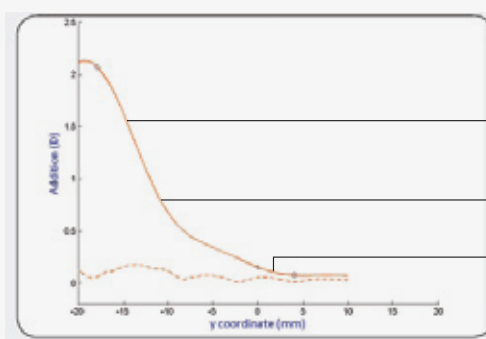

DESIGN PHILOSOPHY

- To aid Accurate Hits & Puts, the vision through Distance & Intermediate area needs a clear distortion free viewing zone.
- NOVA GOLF design provides unmatched viewing at the distance and mid range to view the ball.
- Depth Perception is very important to judge the course variables. The Multi Soft Asymmetric design allows perfect 3D depth perception & Binocular Vision for Golfers reducing distortion and prismatic aberrations.
- It also gives seamless vision zone to read the scoring cards.

REDUCED ABERRATION DUE TO BINOCULAR BALANCING

Nova Golf offers panoramic vision with undistorted peripheral vision

TINTS

BLUE

Features: Soothing, tint that also helps to see contours clearly.

Application: Easy to focus on the target and the ball.

GREY

Features: Reduces overall brightness while preserving 100 percent normal color recognition.

Application: Perfect vision on bright sunny day at golf course.

AMBER

Features: Blocks high amount of blue light to heighten contrast and visual acuity.

Application: Enhanced contrast & visual acuity for better performance at the game.

EMERALD

Features: Heightens contrast (mildly) while preserving color balance.

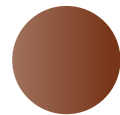

Application: Easy to focus on the ball and the target in green grass background.

GREEN

Features: Will allow colours prominence & cut unwanted glare. Heightens Contrast.

Application: Enhanced vision in low light & cloudy days.

BROWN

Features: Cuts Blue Light, Enhanced Contrast.

Application: Enhanced visual comfort and better concentration due to better focus.

* Colours in the actual lens may varies
